Applied Computer Science graduate awaiting final results and junior full-stack developer with practical experience building AI-assisted systems, automation workflows, dashboard applications, and database-driven platforms. Experienced with Next.js, TypeScript, PostgreSQL, Prisma ORM, PHP, MySQL, Python, MATLAB, Tailwind CSS, and AI/ML workflows across web development, image processing, and data-focused systems.

Frontend

HTML, CSS, JavaScript, TypeScript, Tailwind CSS, Next.js, responsive UI design

Backend & Databases

PHP, MySQL, PostgreSQL, Prisma ORM, SQL, CRUD, schema design, normalization, auth

AI / Data

Python, Jupyter Notebook, preprocessing, feature extraction, model evaluation, confusion matrices

Computer Vision

MATLAB, RGB/HSV thresholding, segmentation, morphology, GLI, centroid/medoid analysis

Cloud / Tools

Git, GitHub, Vercel, VS Code, WAMP Server, phpMyAdmin, AWS foundations, Excel

System Design

Waterfall, OOAD, ERDs, DFDs, use cases, sequence diagrams, testing, documentation

What This Portfolio Demonstrates

- Ability to build and deploy modern full-stack applications with authentication, dashboards, and database-backed workflows.
- Experience with AI/ML coursework across tabular, image, audio, and text data with model evaluation outputs.
- Computer vision and MATLAB image-processing workflow for segmentation, measurement, and ranking tasks.
- Documentation mindset: coursework reports, diagrams, project evaluations, test plans, GitHub repositories, and live deployment evidence.

Dashboard - ranked opportunities and filtering workflow

Portfolio Website

Project Overview

AI Job Match Assistant is a full-stack job discovery and tracking platform designed to help users discover, evaluate, organize, and track job opportunities through a legal semi-automated workflow. It focuses on Trinidad & Tobago job discovery while also supporting remote-friendly roles.

Core Technologies

Next.js, TypeScript, Tailwind CSS, Prisma ORM, PostgreSQL, Vercel, RSS feeds, public APIs, custom scoring logic, dashboard UI components.

Key Value

Shows modern SaaS-style development, backend data modelling, ethical automation, responsive UI design, and deployment readiness.

The screenshot shows the 'Manage legal discovery sources' interface. At the top, a dark green header contains the title and a button 'Run enabled sources now'. Below the header, a sidebar on the left lists navigation options: Dashboard, Review Queue, and a section with icons for Discovery Run, Applications, Profile, Resume, and Settings. The main content area is divided into two panels. The left panel, 'Add discovery source', includes a warning about unsupported or risky sources, a 'SOURCE IDENTIFY' section with a description, and a form with fields for 'Source name' (EmployerPublicJobs), 'Source type' (RSS), 'Base URL' (https://www.payscale.com), and 'Public URL' (https://www.payscale.com/jobs-or-public-feed-LINK). A note below the form states: 'Use the canonical public posting feed URL, which differs from the feed ID link.' The right panel, 'Safe discovery policy', explains the platform's design for legal job discovery and includes a 'PREFER RSS FEEDS, PUBLIC 4TH, AND OFFICIAL COMPANY PAGES' section. It also mentions that keep source-specific legal notices and partner constraints documented and that every discovered job keeps the original source name and URL. At the bottom left, a red 'X' icon with a 'Learn more' link is visible.

Full-Stack Development | AI & Automation | Databases | Computer Vision

Featured Project 2: Cash Compass

Full-stack personal finance tracking web application

Live Demo

Portfolio Website

Project Overview

Cash Compass is a modern personal finance tracking web application designed to help users monitor income, expenses, bills, savings goals, and transaction activity through a clean, animated dashboard.

Core Technologies

Next.js, TypeScript, Tailwind CSS, Prisma, Neon PostgreSQL, Vercel, protected routes, dashboard UI, financial data workflows.

Key Value

Demonstrates product-focused full-stack development, authentication, database-backed financial features, deployment discipline, and a polished fintech-style user experience.

Problem

Personal finance tracking becomes difficult when income, expenses, bills, and goals are spread across separate notes, spreadsheets, and bank statements.

Solution

Built a full-stack finance dashboard that brings transaction activity, bills, savings goals, and financial summaries into a cleaner workflow.

Architecture Highlights

Next.js App Router, TypeScript UI components, Prisma data models, Neon PostgreSQL, secure auth flows, Vercel deployment, and responsive dashboard design.

Professional Relevance

Shows the ability to move beyond coursework into a product-style application with real deployment, practical user flows, and database-backed functionality.

Key Features

- Secure user authentication and protected dashboard pages.
- Income and expense tracking with financial summary cards and charts.
- Bills and savings goals management for practical day-to-day tracking.
- Transaction history and CSV/bank statement upload support.
- TTD and USD currency support with a modern fintech UI and smooth animations.

Featured Project 3: Image Processing - Leaf Morphometric

Page 7

MATLAB computer vision project with segmentation, measurement, and ranking

Morphometric measurements with real-world scaling

Centroid, medoid, and GLI annotation

Project Overview

This MATLAB image-processing project used computer vision techniques to process leaf and coin images, isolate objects, extract biological measurements, and compare leaves using quantitative features. The workflow included RGB/HSV thresholding, binary masks, morphological filtering, boundary detection, centroid and medoid calculations, Green Leaf Index analysis, histograms, and multi-leaf rankings.

Techniques Demonstrated

- RGB/HSV thresholding and object segmentation.
- Morphological cleaning with hole filling and object filtering.
- RGB histogram analysis and color feature extraction.
- Centroid, medoid, GLI, area, perimeter, and axis measurements.
- Multi-leaf ranking by greenness, area, and damage.

Segmentation Output

RGB Histograms

Annotated Leaves

Why This Project Matters

This project adds technical depth beyond standard web development. It shows ability to work with visual data, transform raw images into measurable features, and build analysis workflows that produce interpretable outputs. It strengthens the portfolio for roles involving AI, data, image processing, automation, and analytical programming.

Project Overview

Completed practical AI/ML notebooks across tabular, image, audio, and text data. Work included preprocessing, feature extraction, model training, classification, confusion matrices, evaluation metrics, and visual interpretation of results.

Database Design Projects - Velocity Motors and Toyota

MySQL, SQL, ERDs, DFDs, Data Dictionaries

Completed database design and system analysis projects covering ER modelling, normalization, SQL scripts, data dictionaries, query design, business rules, reports, interface planning, and evaluation.

BIT Project - Mandy's Hardware Inventory / Client Management

Systems Analysis, DFDs, ERDs, CRUD Planning

Designed inventory and client management documentation including requirements, risk management, cost-benefit analysis, DFD, ERD, SQL table planning, interface design, query design, and walkthrough evaluation.

Computer Networks / IT Infrastructure

Subnetting, VPNs, Cisco IOS, Windows, Troubleshooting

Covered topology planning, UDP traffic, server roles, Wi-Fi concepts, site surveys, PoE access points, IPv4 subnetting, security, VPNs, scalability, IoT risks, Windows installation, antivirus setup, and system maintenance.

Portfolio Website

HTML, CSS, JavaScript, GitHub, Vercel

Built and iterated a personal portfolio website with a premium dark interface, interactive project sections, animated UI details, downloadable PDFs, analytics, and Vercel deployment.

Accounts Clerk - Persads Supercenter

Jun 2024 - Jan 2025

- Managed daily financial records and data entry using Microsoft Excel.
- Tracked sales, payroll, daily income reports, and cash flow balancing.
- Maintained accuracy through transaction checks and structured reporting.
- Built transferable strengths in data accuracy, confidentiality, organization, and problem solving.

Cashier / Inventory Assistant - Mandy Sooklal Hardware

Jun 2022 - Sep 2022

Processed customer transactions accurately while supporting stock updates, restocking, and basic inventory monitoring. Developed communication, customer service, teamwork, and operational organization skills in a busy retail environment.

Education

- BSc (Hons) Applied Computer Science - Anglia Ruskin University, delivered through SAMS - awaiting final results.
- NCC Education Level 5 Diploma in Computing / Computer Business - SAMS - Completed 2025.
- NCC Education Level 4 Diploma in Computing / Computer Business - SAMS - Completed 2024.
- High School Diploma - Cowen Hamilton Secondary School - 2017-2022.

Target Remote Roles

- Junior Full-Stack Developer
- Junior Web Developer
- AI Automation Assistant
- IT Support Technician
- Data Operations Assistant
- Database Support Trainee

Recruiter Keywords

Next.js, TypeScript, PHP, MySQL, PostgreSQL, Prisma, Python, SQL, REST APIs, GitHub, authentication, dashboards, CRUD, Excel reporting, MATLAB, computer vision, AI/ML.

Rohan Rampersad - Technical Portfolio Summary

Applied Computer Science graduate awaiting final results and junior full-stack developer with practical experience in full-stack web development, AI/ML coursework, MATLAB image processing, database design, systems analysis, cloud foundations, and data-focused work.

Main Strengths

- Deployed full-stack job discovery app using Next.js, TypeScript, Prisma, PostgreSQL, and Vercel.
- Built Cash Compass, a full-stack personal finance tracking app with authentication, financial dashboards, bills, savings goals, and Neon PostgreSQL.
- Computer vision project using MATLAB segmentation, morphology, GLI, histograms, measurements, and rankings.
- AI/ML notebook work across tabular, image, sound, and text data with evaluation visuals.
- Database and systems analysis background with ERDs, DFDs, SQL, normalization, documentation, and testing.
